

Question 1

Generate the search tree for *the stone game*(6,3) and use minimax algorithm to calculate the value of each node hence decide the winner for that game assuming rational steps

The game tree is:

The game tree after evaluation is:

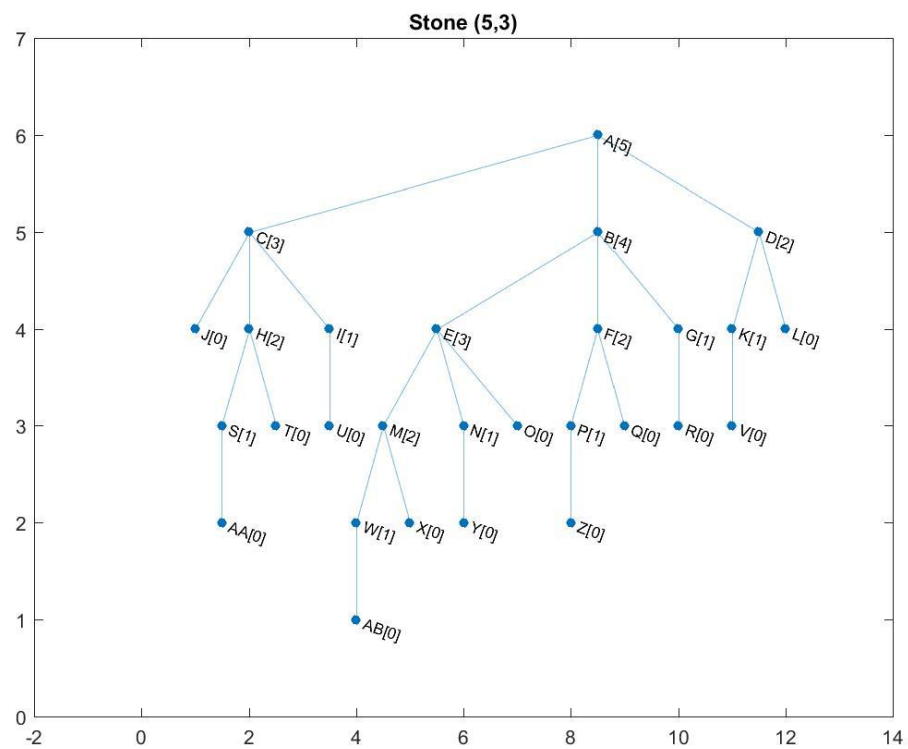

Based on the above graph Max player will win

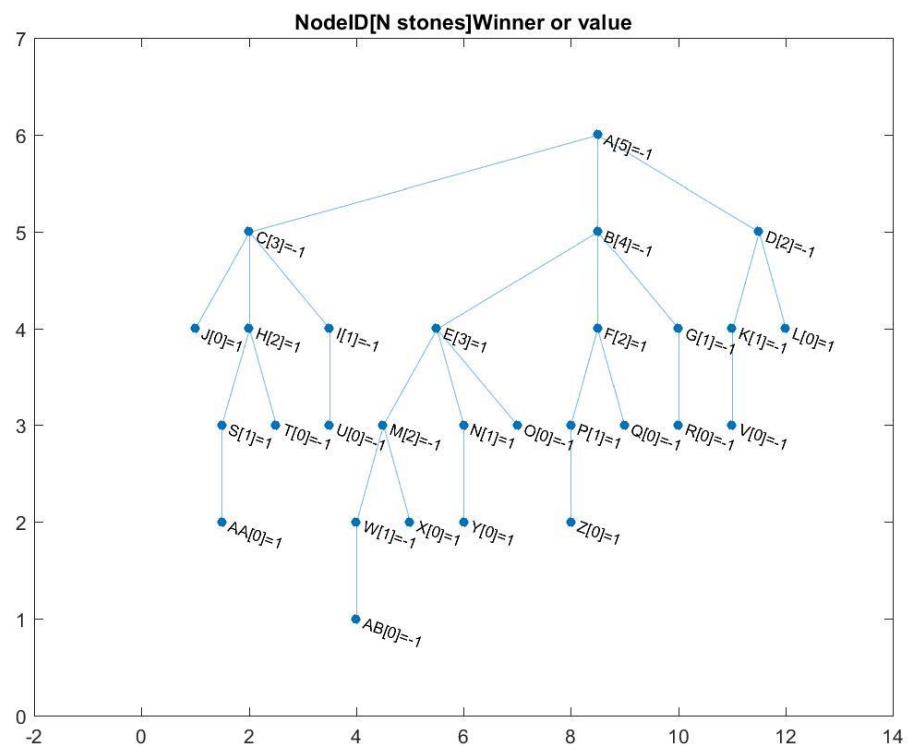

Question 2

Generate the search tree for *the stone game*(5,3) and use minimax algorithm to calculate the value of each node hence decide the winner for that game assuming rational steps

The game tree is:

The game tree after evaluation is:

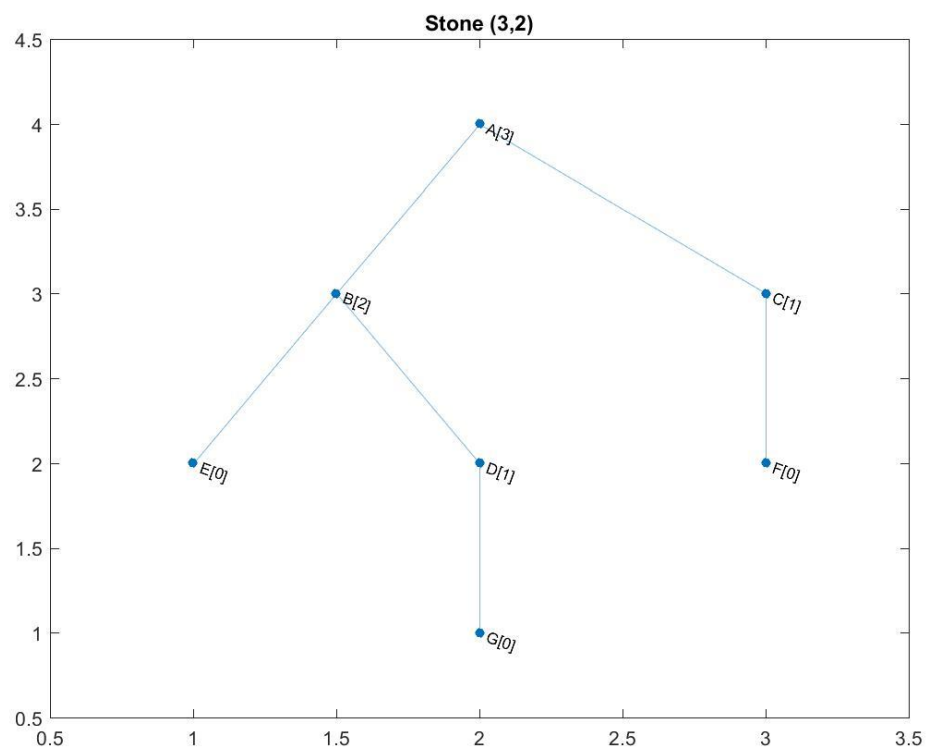

Based on the above graph Min player will win

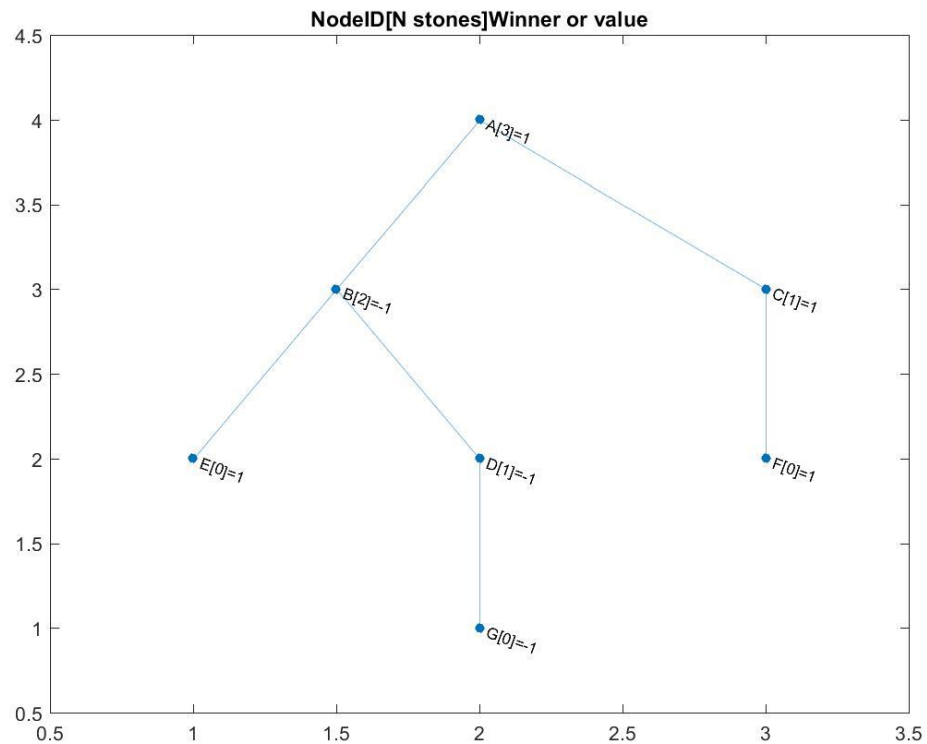

Question 3

Generate the search tree for *the stone game*(3,2) and use minimax algorithm to calculate the value of each node hence decide the winner for that game assuming rational steps

The game tree is:

The game tree after evaluation is:

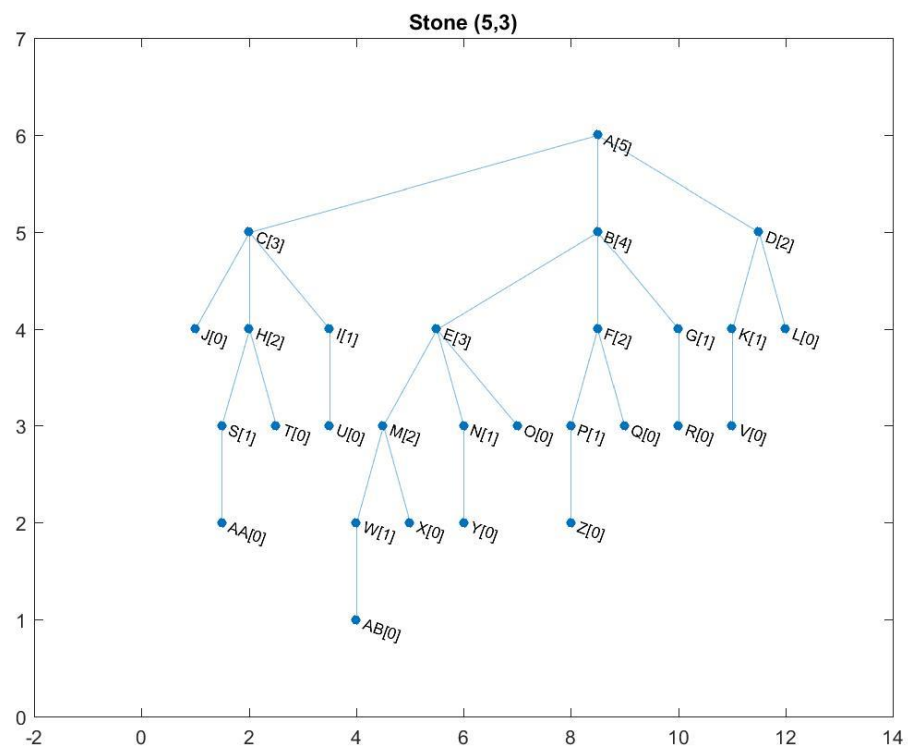

Based on the above graph Max player will win

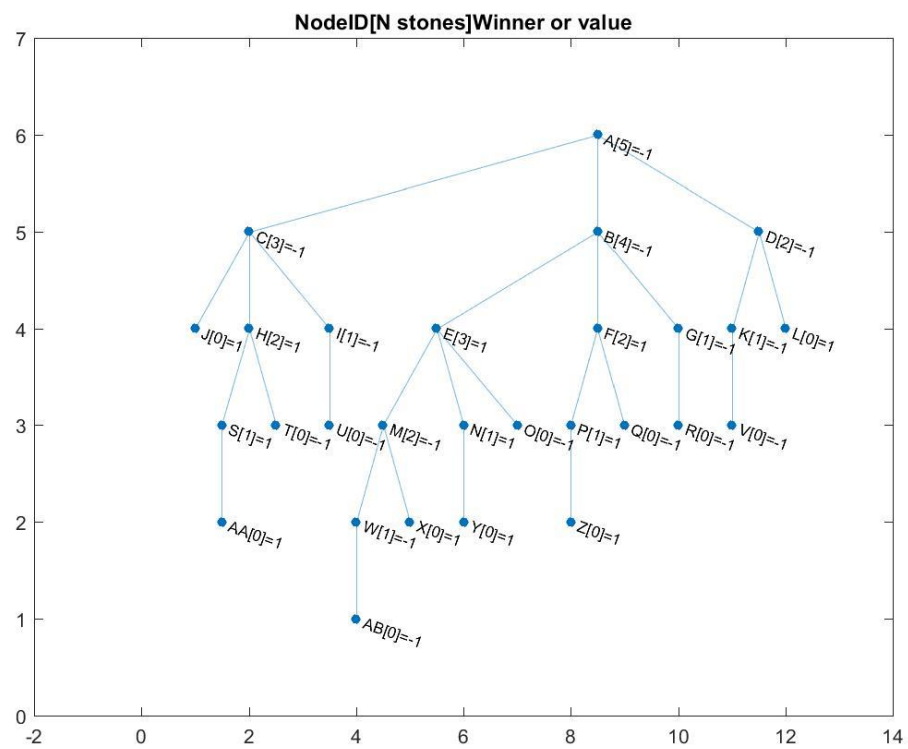

Question 4

Generate the search tree for *the stone game*(5,3) and use minimax algorithm to calculate the value of each node hence decide the winner for that game assuming rational steps

The game tree is:

The game tree after evaluation is:

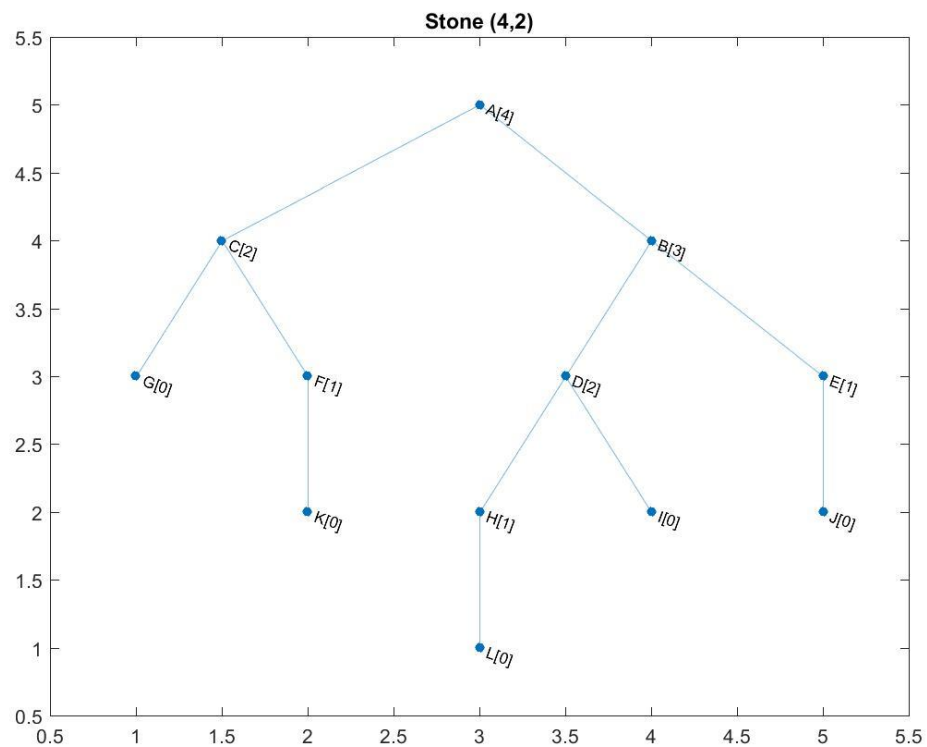

Based on the above graph Min player will win

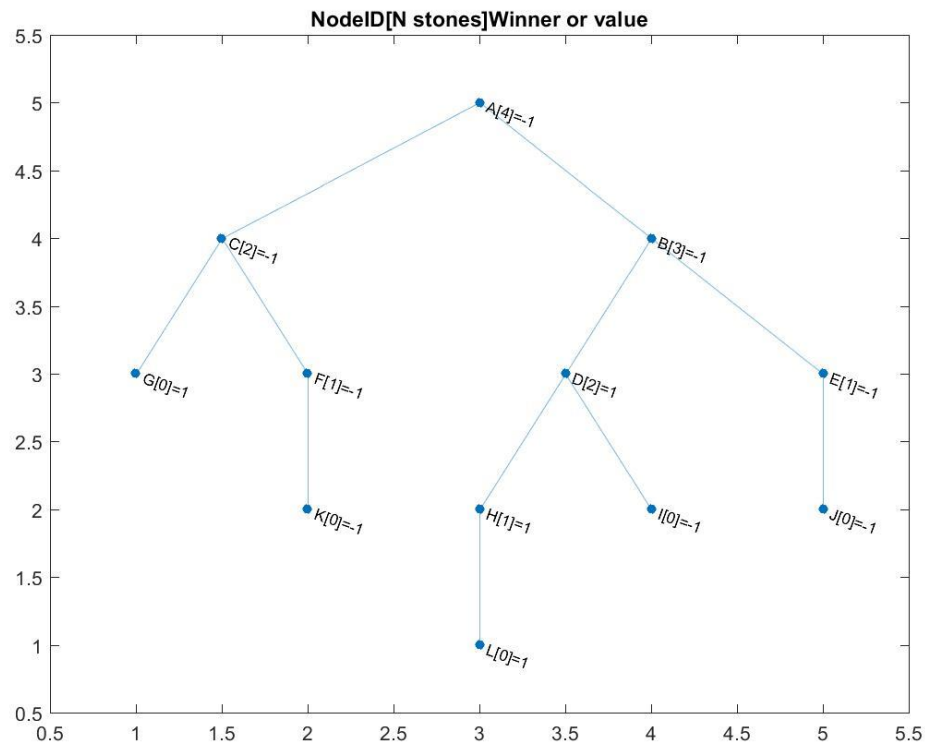

Question 5

Generate the search tree for *the stone game*(4,2) and use minimax algorithm to calculate the value of each node hence decide the winner for that game assuming rational steps

The game tree is:

The game tree after evaluation is:

Based on the above graph Min player will win

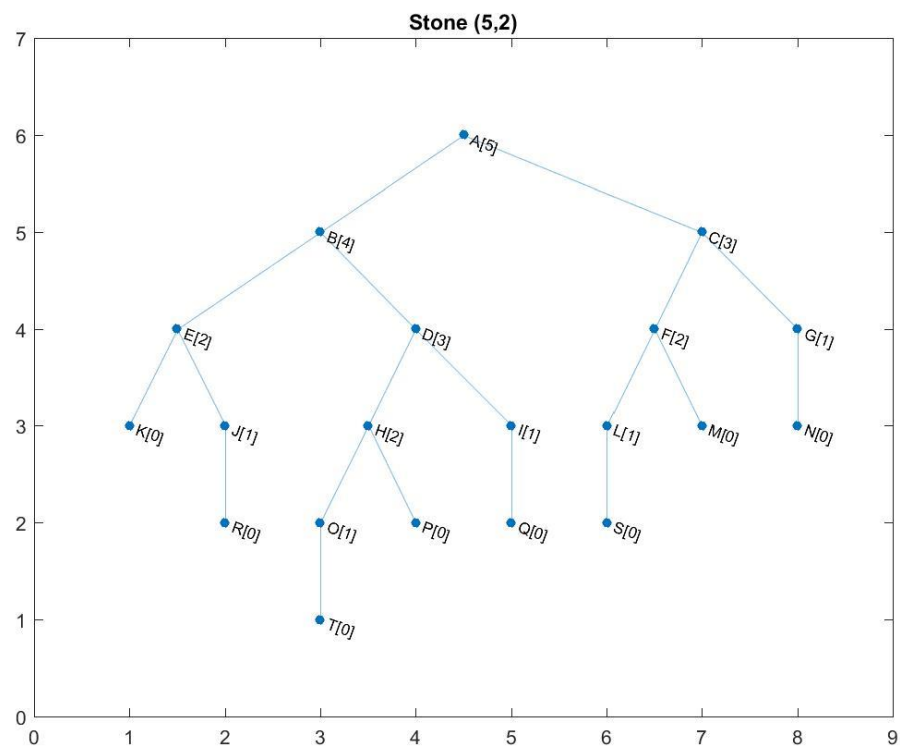

Question 1

Given the following search tree for *the stone game*(5,2), use expectiminimax algorithm to calculate the value of each node hence decide the winner for that game.

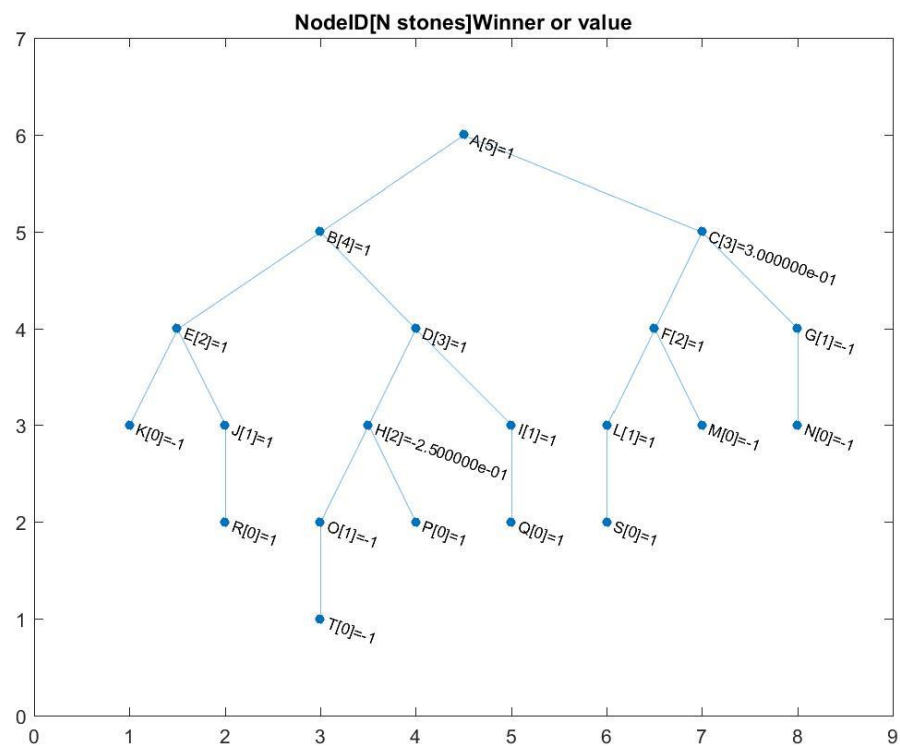

Assume the following switching probabilities for min player:

Action	p
O[1]	0.63
P[0]	0.37
F[2]	0.65
G[1]	0.35
D[3]	0.82
E[2]	0.18

The game tree is is:

The game tree after evaluation is:

Based on the above graph Max player will win

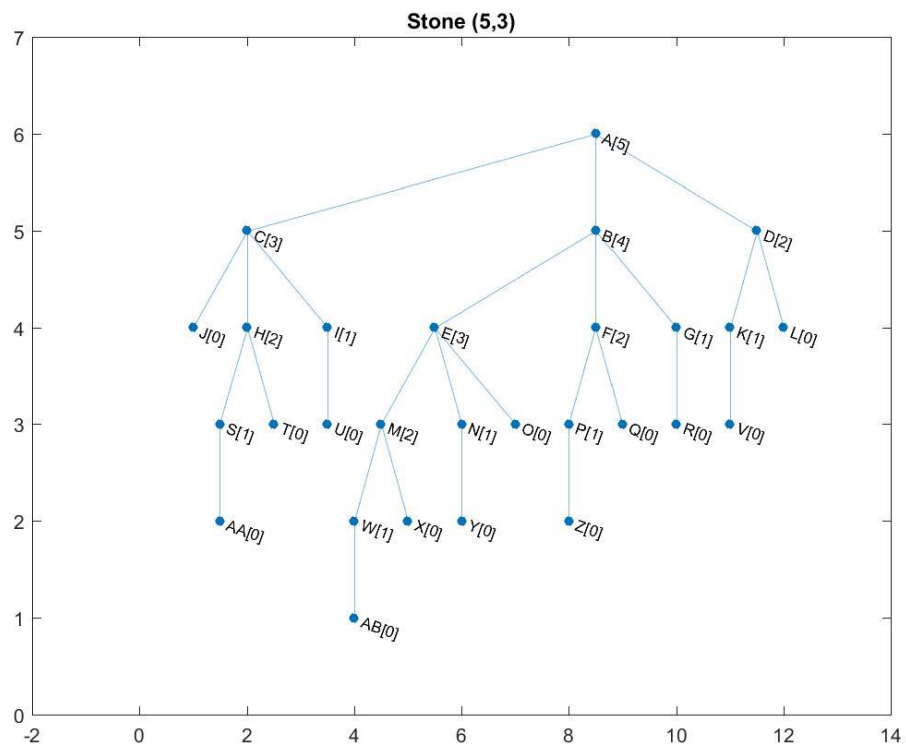

Question 2

Given the following search tree for *the stone game*(5,3), use expectiminimax algorithm to calculate the value of each node hence decide the winner for that game.

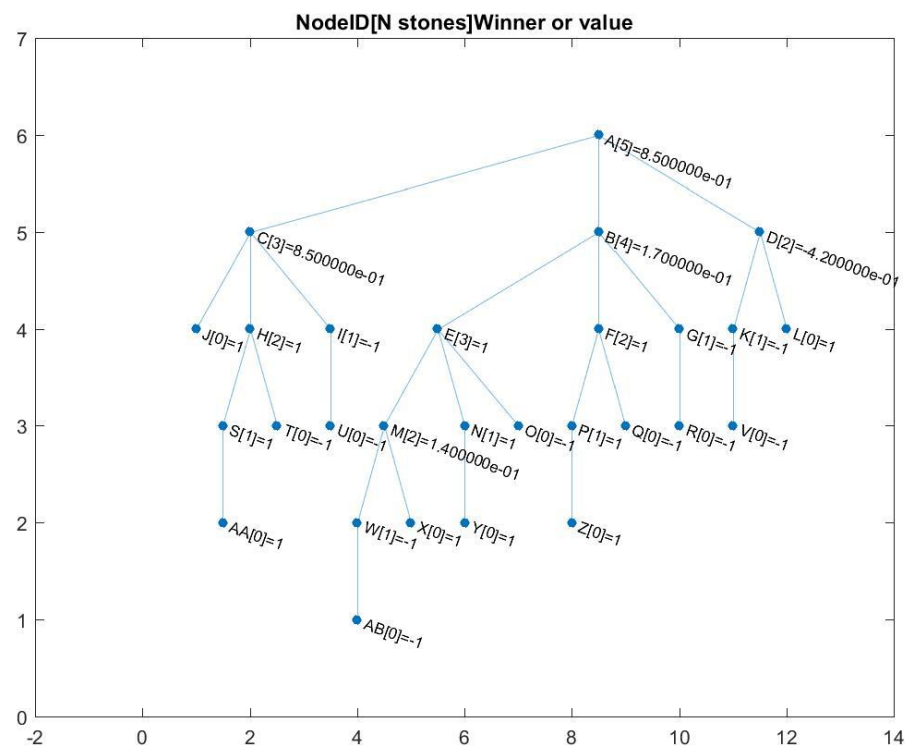

Assume the following switching probabilities for min player:

Action	p
K[1]	0.71
L[0]	0.29
W[1]	0.43
X[0]	0.57
H[2]	0.42
I[1]	0.07
J[0]	0.50
E[3]	0.22
F[2]	0.37
G[1]	0.41

The game tree is:

The game tree after evaluation is:

Based on the above graph Max player will win

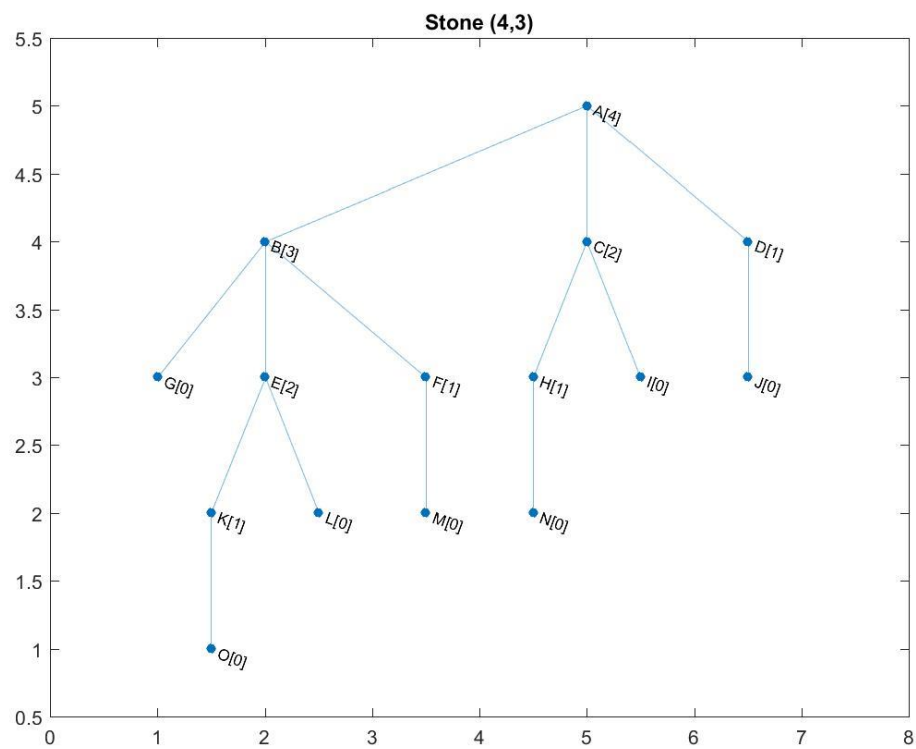

Question 3

Given the following search tree for *the stone game*(4,3), use expectiminimax algorithm to calculate the value of each node hence decide the winner for that game.

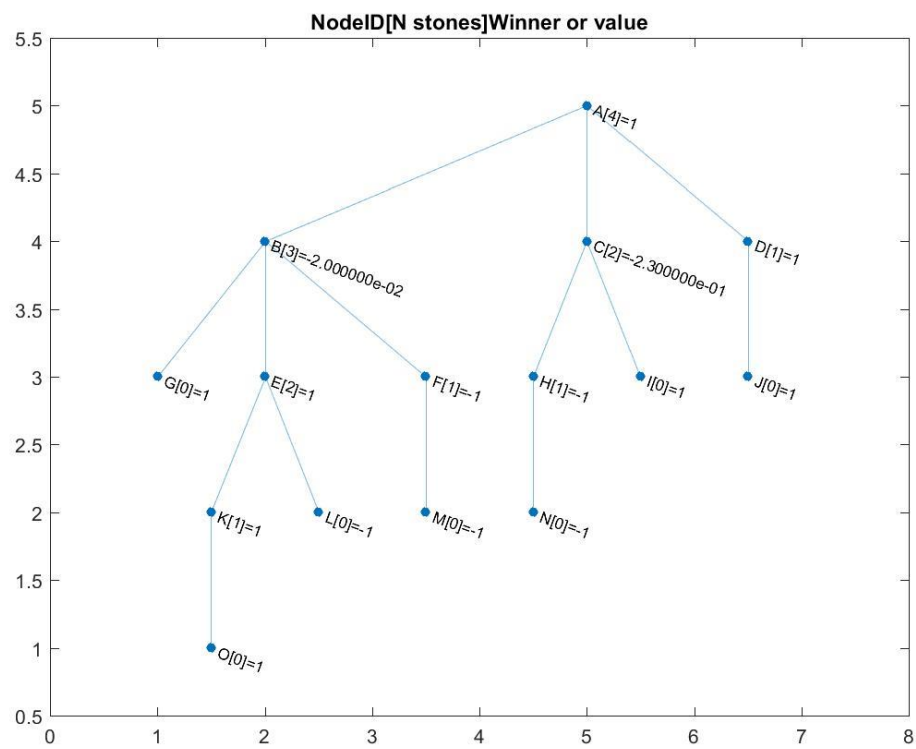

Assume the following switching probabilities for min player:

Action	p
H[1]	0.62
I[0]	0.38
E[2]	0.18
F[1]	0.51
G[0]	0.31

The game tree is:

The game tree after evaluation is:

Based on the above graph Max player will win

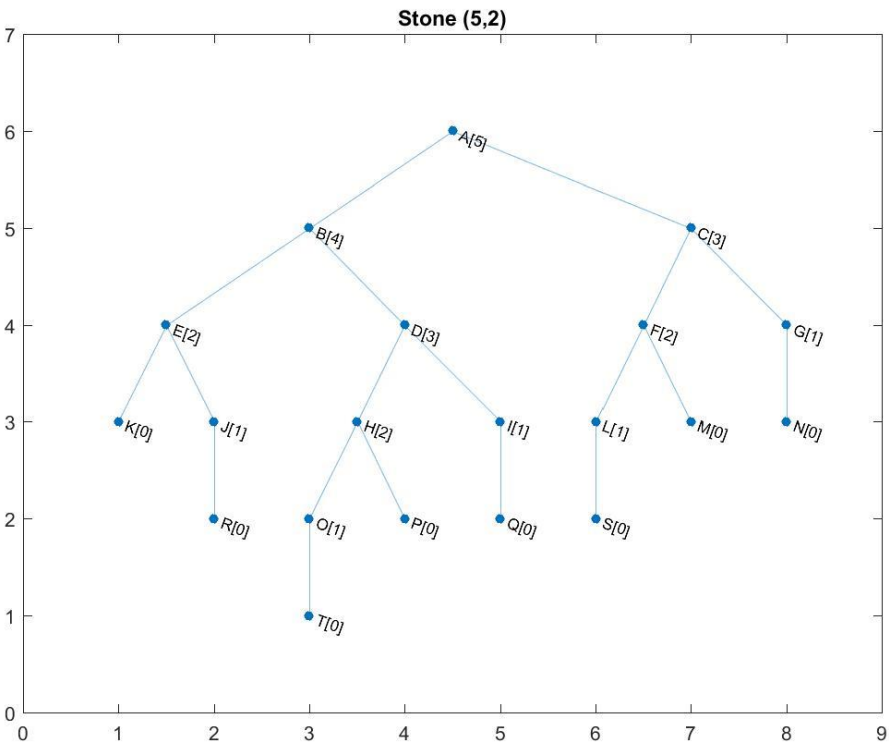

Question 4

Given the following search tree for *the stone game*(5,2), use expectiminimax algorithm to calculate the value of each node hence decide the winner for that game.

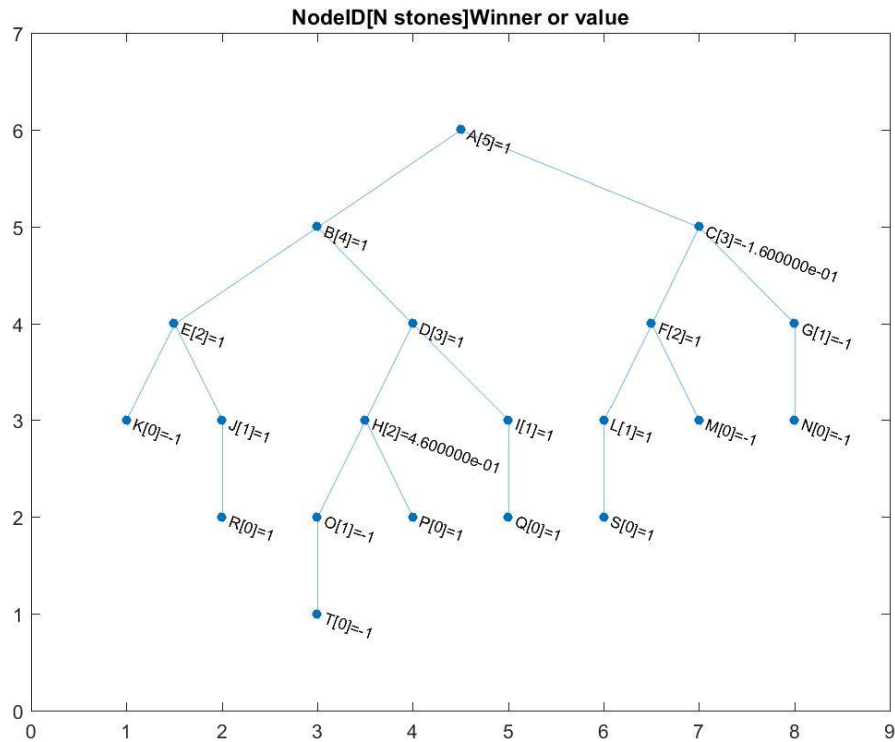

Assume the following switching probabilities for min player:

Action	p
O[1]	0.27
P[0]	0.73
F[2]	0.42
G[1]	0.58
D[3]	0.77
E[2]	0.23

The game tree is:

The game tree after evaluation is:

Question 1

Generate the search tree for *the stone game*(7,3) and use minimax algorithm to calculate the value of each node hence decide the winner for that game assuming rational steps for 3 players

The game tree is:

The game tree after evaluation is:

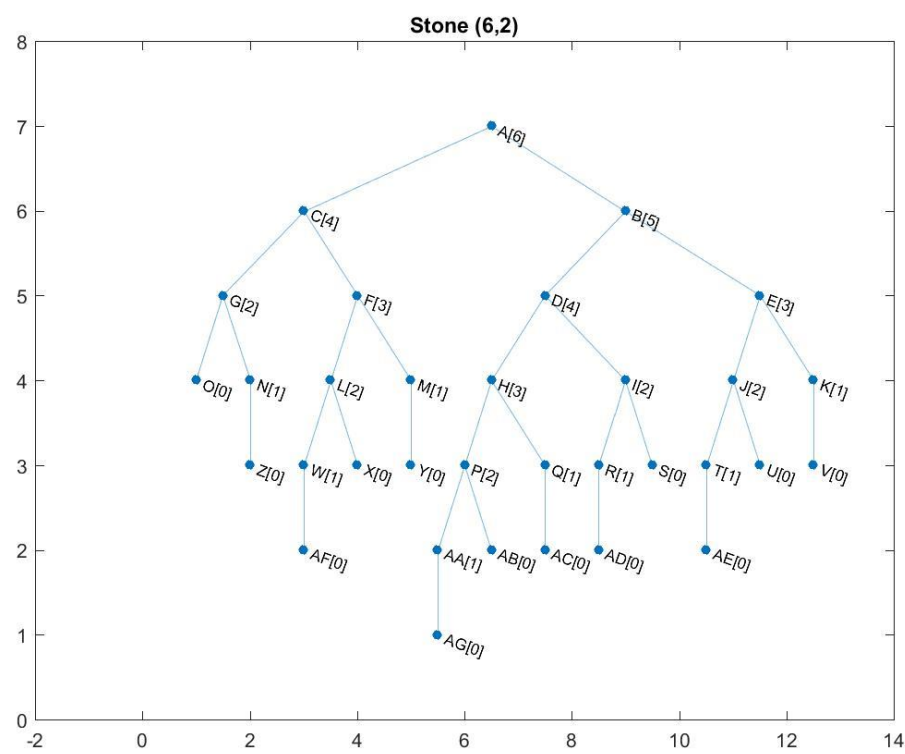

Based on the above graph Min player will win

Question 3

Generate the search tree for *the stone game*(6,2) and use minimax algorithm to calculate the value of each node hence decide the winner for that game assuming rational steps for 3 players

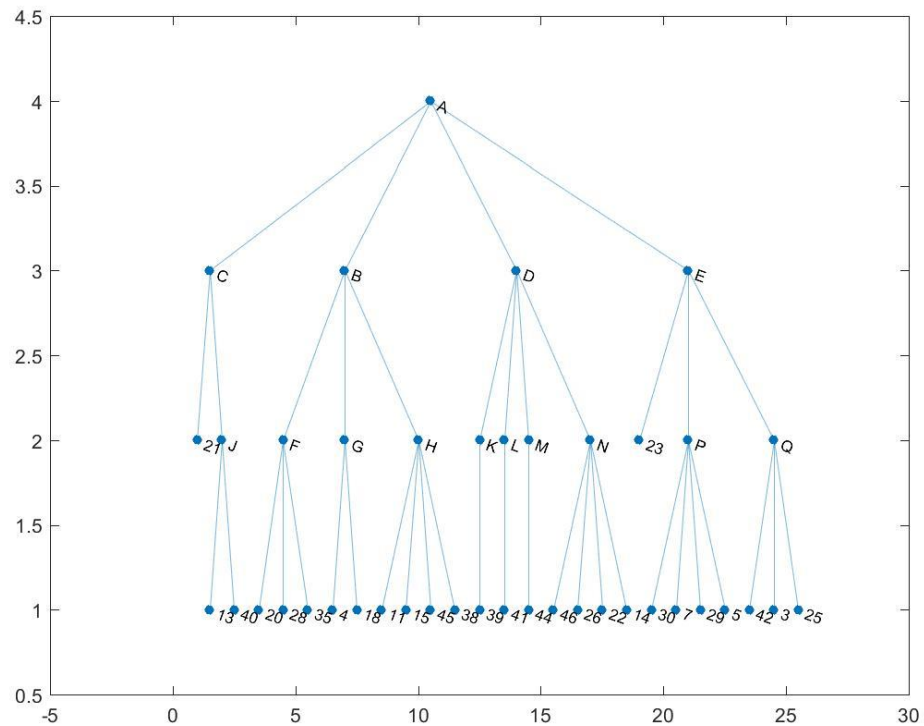

The game tree is:
